--	---

Planned Tasks & Activities:	<p>The Corporate Process & Information Technology (CPIT) unit is the internal IT of SAP and the backbone for its digital transformation. It provides advanced solutions, technology and operational support to our internal clients, our employees. Supporting more than 100,000 employees and thousands of SAP systems, we are responsible for SAP's worldwide internal business applications and IT infrastructure.</p> <p>The Customer Engagement Tools Team provides the technological backbone for the Customer Engagement, Service Delivery and Mission Critical Support processes and organizations. Striving to bring applications from trusted and stable legacy technology stacks to a modern, future-proof and resilient architecture the team works closely with their stakeholders to support and enable their journey to the intelligent enterprise.</p>
--	--

We are also responsible for customer-facing assets within *SAP for Me*, SAP's customer portal, which serves four hundred thousand customers worldwide.

Your tasks will include:

- contributing to the development of user interfaces using HTML, CSS, and JavaScript frameworks in alignment with other senior developers. At the same time, you will be building server-side logic and APIs using technologies such as oData
- active participation in Scrum and SAFe Events
- participating in technical and process-related team discussions means and gaining exposure to the full software development lifecycle within the cross-functional team
- collaborating with UX Designers and Stakeholders on the design of the applications
- infusing AI capabilities into applications
- collaborate across team boundaries to develop applications within existing frameworks e.g. Mobile

Remarks:
